

Automatic feeder for wrapping machine M220

FOR FEEDING CHOCOLATE DISKS

The hopper is loaded with bulk chocolate disks and its high capacity- approximately 30 l - guarantees long operational autonomy.

A system for eliminating broken disks ensures that only perfectly intact disks are fed into the M220.

This feeder allows the M220 to be set in line with the chocolate disk production system for fully automated feeding or as an independent unit composed by the AM220 and M220, where the operator must only load the bulk chocolate disks and therefore, they can feed and monitor several machines.

Main characteristics

- ✓ The layout of the feeder elements can be varied so as to achieve that which best suits your needs
- ✓ The M220 is fed through loading tubes
- ✓ The production is regulated by an electronic device
- ✓ The changing of the format is extremely simple and fast

The device may be easily connected to the wrapping machine without making any modifications and this allows it to be installed on site even on machines already working.

Coin dimensions (mm)		Load tubes	Production units/min		Overall dimensions (mm)			Power kW	Weight Kg
min	max		min	max	Larg.	Lung.	Altez.		
20 X 2.5	45 X 5	2	180	220	1500	1200	1600	1	400
46 X 4	88 X 6		1	70
