

Vertical accumulator

AUTOMATIC MACHINE FOR THE ACCUMULATION OF PRODUCTS IN PACKAGING LINES

The machine accumulates products when the line downstream is unable to receive them and it reintroduces the products automatically as soon as the machine is able to reabsorb them; this means that any accidental pauses occurring downstream in the packaging system do not halt production, which has huge advantages: a reduction in the workforce required to carry out this procedure, much higher productivity guaranteed.

The system is designed for packs of liquids and is very versatile, offering benefits for a wide variety of sizes and other types of products of a similar, regular shape.

Main characteristics

- ✓ Easy to install
- ✓ Maximum capacity with minimum dimensions
- ✓ Simple to use
- ✓ Possibility of extending capacity
- ✓ Increased production efficiency

Product dimensions (mm)		Max. accumulation speed	Accumulation in the standard version	Power kW	Weight Kg
min	max				
60x40x80	100x75x250	20 m/min	40-80 m	1,5	1200
